LANGUAGES

German C2

Bosnian C2

English C2

French B2

SKILLS

LANGUAGES
TypeScript, C#, Ruby, Rust, C, Python, SQL

FRAMEWORKS
Angular, NestJS, ASP.NET, Ruby on Rails, Astro, LangGraph.js

DATA
PostgreSQL, MySQL, Qdrant, Drizzle

INFRASTRUCTURE
Docker, CI/CD, Bun, Turborepo

CONCEPTS
MCP, RAG, Agentic systems, NLP, IR, Secure development, Scrum, TDD

ACHIEVEMENTS

Winner of Hack Winterthur 2026
2026

EFZ completed with an outstanding grade (5.5) and honours
2024

Swiss IT skills championship: 3rd regional, 8th national
2024

Anes Hodza

Full-Stack, Security & AI-Engineer.

WORK EXPERIENCE

JAN 2026 · PRESENT
Zurich

Co-founder · *Centro Labs*
Co-founded Centro Labs, where I built LocalMate, an agentic AI assistant that answers questions over an organisation's own documents through the Model Context Protocol. It won Hack Winterthur 2026, handles around 600 queries a week as a live prototype, and is now in talks with larger companies about adoption, alongside an invitation to exhibit at Startup Nights. Product, architecture and go-to-market are all mine.

JAN 2026 · PRESENT
Lenzburg

Security & Full-Stack Software Engineer · *Diartis AG*
I build C# and Angular features for means-tested social-assistance software that shorten the tasks caseworkers do every day, working test-first in a team of about twenty. I brought AI-assisted development to the team, a Claude Code setup with reusable skills that saves fifteen to sixty minutes each time it stands in for plain coding, and I investigate CVEs to make sure none reach production. Most of my focus is security engineering.

AUG 2024 · PRESENT
Zurich

Student Researcher & Teaching Assistant · *ZHAW*
Student Researcher (since Sep 2026). In the DataGEMS group under Prof. Kurt Stockinger and Dr. Farhad Nooralahzadeh, I lead our paper on SemEval-2027 Task 3: semantic change detection across multiple time periods.
Teaching Assistant in Theoretical Computer Science (since Aug 2024). Weekly small-group tutoring for THIN (about 160 students) on automata, Turing machines and formal grammars; attendees tend to score well above average.

AUG 2023 · DEC 2025
Zurich

Full-Stack Software Engineer · *Sitrox AG*
Full-stack work on an internal Ruby on Rails framework. My main project was a data-warehousing pipeline that combined supplier purchase prices, competitor prices and government pricing rules to compute competitive retail prices; there I took a join over roughly 750,000 by 6 rows from a multi-day runtime down to about an hour. I also built the software for Switzerland's only blister centre, interfacing directly with its packaging machines and scanners.

AUG 2022 · JUL 2023
Wallisellen

Full-Stack Software Engineering Intern · *Renuo AG*
My first full-stack role, on a four-person Rails team. I shipped roughly a feature a day at 100% test coverage.

PROJECTS & RESEARCH

Evaluating LLMs on Text-to-SQL 2026
A course paper comparing three ways to turn plain-language questions into SQL over real Swiss federal statistics: a fixed grounding pipeline, a ReAct agent that probes the database, and a hybrid, built on LangChain and LangGraph.

mini-retrieve: a search engine in Rust 2025
A search engine written from scratch in Rust, from tokeniser and stemmer to an inverted index and BM25 ranking. My deepest dive into applied low-level and high-performance programming, at roughly 70 microseconds per Cranfield query.

Query Errors & Cognitive Variance 2025
A short paper on how typos, Parkinson's and dyslexia degrade BM25 search, and how a Levenshtein correction step recovers it.

Numerical methods (HM2) 2025
Around twenty numerical methods from scratch in Python (splines, Runge-Kutta, Romberg, and more), which earned a perfect 6.0 in a ZHAW maths course.

EDUCATION

2023 · 2027
GPA 5.3

BSc Computer Science · *ZHAW Zurich University of Applied Sciences*

2019 · 2023
final grade 5.2

Wirtschaftsmatur (Swiss commercial baccalaureate) · *Kantonsschule Büelrain Winterthur*

2019 · 2023
final grade 5.5

Informatiker EFZ (Federal VET Diploma in IT) · *Berufsbildungsschule Winterthur*
